TECHNICAL SUMMARY

I am a robotics-focused engineer associated with IIT Patna, with hands-on experience in autonomous systems and robotics software development. My background includes sustained project-based learning, progressing from custom electronics to system-level robotics. I document technical experiments and implementations through my **portfolio** and **Electrobotics AI** platform. My work centers on integrating embedded firmware with ROS2-based robotic systems, emphasizing robust hardware–software integration and real-world system behavior.

EDUCATION

- **Bachelor of Science (BS)**, Artificial Intelligence and CyberSecurity | IIT Patna
- **Computer Science (CS)** | Institute of Innovation (PW), Bangalore

TECHNICAL SKILLS

- **Robotics Frameworks:** ROS2 (Humble), Nav2 Stack, MoveIt2, URDF Modeling, TF2
- **Programming Languages:** C++ (OOP), Python, MicroPython, Bash Scripting
- **Computer Vision & AI:** OpenCV, YOLO, MediaPipe, TensorFlow, SLAM
- **Embedded Systems:** ESP32, STM32, Raspberry Pi, Arduino, PCA9685
- **Control & Kinematics:** PID Tuning, Inverse Kinematics, Gait Dynamics, State Estimation
- **Hardware Communication:** UART (Serial), I2C, SPI, CAN Bus (Basics)
- **Simulation & Modeling:** Gazebo, RViz2, Fusion 360 (CAD), MATLAB/Simulink
- **Development Tools:** Linux (Ubuntu), Git/GitHub, VS Code, WSL2, Docker (Basics)

TECHNICAL EXPERIENCE

- **6-DOF Robotic Arm**
 - Designed and simulated a 6-joint robotic arm in ROS2 using URDF, Rviz, and MoveIt for motion planning and control.
- **Custom DWA Local Planner (ROS2)**
 - Developed a custom DWA-based local planner in ROS 2 for obstacle-aware motion planning using LiDAR and odometry inputs.
- **Autonomous Mobile Robot (AMR)**
 - Built an AMR using Raspberry Pi and RPLIDAR with ROS 2, capable of basic path planning and autonomous navigation.
- **Quadruped Robotic Dog**
 - Engineering an autonomous quadruped robot capable of walking, running, and turning, with future integration of AI-based navigation, mapping, and localization.
- **AI-Powered Gesture-Controlled Robotic Hand**
 - Developed a robotic hand controlled via OpenCV and MediaPipe.
 - Integrated servo motors with real-time vision processing for accurate hand movements.
- **Surveillance Drone**
 - Designed and built a drone equipped with real-time video streaming for aerial monitoring and surveillance.
